TelstraClear's IP Connect™ is making voice communication simpler for you by easily integrating multiple locations together for calling. By using Internet Protocol (IP), IP-PBX and with the power of advanced phone systems, we provide you with an easy way of working and managing your communication within your business.

IP Connect is our SIP Trunking service for business, allowing you to connect a traditional ISDN PBX, as well as a new IP-PBX or Unified Communication solution to the public telephone network, so you can make and receive calls.

IP Connect is provided over our own network and our suppliers' networks.

Recommended if you:

- Have between 20 and 100 staff in a single office
- Are connecting multiple sites together using Private IP
- Are upgrading to an IP-PBX with TelstraClear, like our Avaya IP Office or Cisco Call Manager
- Have an existing solution like Asterisk, NEC, IPFX, Panasonic, that you would like to connect
- Want to be able to easily scale your service as your business grows.

Your computer network can be integrated using wide-area IP networks like Private IP – so why not use this power to also bring your business locations together for an integrated calling solution?

Even if you're just need connection in one location – IP Connect will get you connected.

Voice over IP is a fast developing technology – and at TelstraClear, we focus on bringing this technology to you, in a reliable and scalable way.

Your Competitive Advantage

Scalable Capacity and Quality

The service is scalable, so you don't have to guess where your business will be in one, two, or five years. Simply scale your service as you need. We can upgrade or reduce your bandwidth as you need.

Greater communication efficiency

By easily integrating multiple locations together, your organisation can experience improved calling and communication between offices and collaboration between teams.

Pathway to the future

Investing in IP and Ethernet means your company is positioned to take advantage of converged applications.

Your Profitability Advantage

Cost changes

Focus your investment in telephony equipment and use more common IP equipment for your computers and your telephony – reducing your infrastructure support costs and removing the need to support analogue calling as well.

IP end to end

IP end to end is simpler for you and simpler for TelstraClear to implement, while ultimately helping add value to your business.

Because it's digital, IP Connect means you'll enjoy high call quality. Your voice services will be IP end to end with no analogue conversion along the way.

IP Connect is available with our Managed Voice Services (Avaya IP Office), and with our Cisco Call Manager systems (which allows integration into a bespoke call management system). Or bring your own PBX or IP-PBX – if it has an ISDN or SIP connection, we're interested in getting you connected!

TelstraClear Next IP Network IP Connect™

Key Features

Integrated Access

Offering high quality business voice and internet, all from the network. Neat, tidy, less wires and less pieces of kit.

Cost Effective

Bring an ISDN or SIP PBX – we can usually connect most solutions.

Full Support with Managed Voice

When taken with Managed Voice (Avaya) we deliver a fully supported end to end solution, right down to user telephones.

Systems Integration

Bring your own PBX – SIP ready, or classic ISDN (Basic Rate or Primary Rate) – we will connect you to the PSTN and you can take advantage of what IP Connect can offer.

High Quality IP Voice

Engineered end to end for high-quality voice performance and available across our IP Access network, metro, urban, provincial. This is Business grade – we will keep you connected so you can keep running your business.

Getting Started

IP Connect is built as a service that uses our Next IP technology over our Private IP core network and our suppliers' networks, and is fully supported by us.

For direct connection to IP Connect, contact us and we will tailor a solution to need your needs.

You may be able to bring your own calling solution and we will review whether we can support connection.
